

Welcome to Usage Engine Cloud Edition Documentation

Cloud Edition

Usage Engine is a next-generation product to process billing data, built using the latest technological advancements, and is continuously developed to meet the demands of different industries. It offers:

- Total flexibility with the ability to collect data of any type, from any location
 - Customer-centric intelligence to correlate and aggregate data, and bind it to a specific customer in real-time
 - 100% accuracy with no data loss
 - Scalability to meet the requirements of both small and large businesses in any industry
-

Usage Engine collects records from IT and network assets using a variety of file transfer protocols, message queues, and RESTful APIs.

Examples of records include:

- Service usage
- Purchase orders
- Reservations

The collected data is processed in user-configured streams for:

- Deduplication
- Validation
- Filtering
- Aggregation and correlation
- Splitting and merging
- Recording data statistics

As a user of Usage Engine, you can build and operate streams using a flow-based graphical user interface. Add parameterised or code-enabled functions to your streams to collect, process, and forward data as required by your solutions.
